## PERMUTATIONS AND COMBINATIONS Guided Notes

1. If a Task 1 can be done in $n_{1}$ ways, and a Task $\mathbf{2}$ can be done in $n_{2}$ ways, $\ldots$, and a

Task $\boldsymbol{k}$ can be done in $n_{k}$ ways, then all of these tasks can be done in
$\qquad$ .
2. A permutation is the choice of $\qquad$ things from a set of $n$ things without replacement and where the $\qquad$ matters.

Mathematically, it is represented as $\qquad$ .
$n!$ is represented by $\qquad$ .
${ }_{0}^{n} P=$ $\qquad$ .
${ }_{3}^{5} P=$ $\qquad$ .
3. A combination is the choice of $\qquad$ things from a set of $n$ things without replacement and where the $\qquad$ does not matter.

Mathematically, it is represented as $\qquad$ .
${ }_{0}^{n} C=$ $\qquad$ .
${ }_{3}^{5} C=$ $\qquad$ .
4. The value of ${ }_{0}^{n} P=$ $\qquad$ .
