## Solving Equations Guided Notes

| Reflexive <br> Property | For all real numbers $x, x=x$ <br> A number equals itself |  |
| :---: | :---: | :---: |
| Reflexive Property | For all real numbers $x$ and $y$, $\text { If } x=y \text {, then } y=x$ <br> Order of equality does not matter | These three Properties define an equivalence relation |
| Transitive Property | For all real numbers $x$ and $y$, <br> If $x, y$ and $z$ <br> If $x=\mathrm{y}$ and $\mathrm{y}=\mathrm{z}$ then $\mathrm{x}=\mathrm{z}$ <br> Two numbers equal to the same number are equal to each other |  |
| Addition Property | For all real numbers $x, y$ and $z$, If $x=\mathrm{y}$, then $x+z=\mathrm{y}+\mathrm{z}$ |  |
| Subtraction <br> Property | For all real numbers $x, y$ and $z$, If $x=y$, then $x-z=y-z$ |  |
| Multiplication Property | For all real numbers $x, y$ and $z$, If $x=y$, then $x z=y z$ | involving real numbers |
| Division Property | For all real numbers $x, y$ and $z$, If $x=y$, and $\mathrm{z} \neq 0$, then $\frac{x}{z}=\frac{y}{z}$ |  |

## Solving Equations Guided Notes

Questions:

1. Solve the following equation for $x$
$2 x+6=3 x+9$
$6-9=3 x-2 x$
$x=-3$
2. Solve the following equation for $x$
$4(2 x+6)=2(-4 x-10)$
$8 x+24=-8 x-20$
$8 x+8 x=-20-24$
$16 x=-44$
$x=-\frac{11}{4}$
3. Solve the following equation for x

$$
\begin{aligned}
& \frac{x+4}{6}=10 \\
& x+4=6 \times 10 \\
& x+4=60 \\
& x=60-4 \\
& x=56
\end{aligned}
$$

4. A restaurant charges $\$ 9.95$ for a large pizza with two toppings, and $\$ 1.25$ for each additional topping. John bought a pizza which cost him $\$ 13.7$. Find the number of toppings.
$9.95+1.25 x=13.7$
$1.25 x=13.7-9.95$
$1.25 x=3.75$
$x=\frac{3.75}{1.25}$
$x=3$ toppings
